

FOR IMMEDIATE RELEASE

BLIZZARD® Snowplows SECURITY GUARD™ Snowplow Anti-Theft System

Milwaukee (May 12, 2010) – With the frequency of snowplow thefts on the rise, the BLIZZARD SECURITY GUARD system provides an additional layer of protection.

The SECURITY GUARD system was developed as an electrical anti-theft system that provides a deterrent from theft and/or non-permitted use. It's included at no additional cost on most new BLIZZARD model snowplows. SECURITY GUARD allows the operator to electronically lock the snowplow's hydraulic function to render the plow inoperable.

Unlike physical locks that can be cut or removed, the SECURITY GUARD system uses the snowplow's electrical system, synchronizing the control and the plow to lock down the electrical functionality and prevent unwanted users from activating the snowplow.

For more information, contact your local BLIZZARD snowplow dealer or visit the BLIZZARD Snowplows website, www.blizzardplows.com.
